About me

More than 15 years of experience in software development, where I played all the roles: programmer, analyst, team leader and technology manager.

Extensive experience in different technologies, integration of complex systems, coexistence of legacy with modern software solutions and technological renovation processes.

Skills

(*)[The skill scale is from 0 (Fundamental Awareness) to 6 (Expert).]

Interests

I am particularly interested in those methodological approaches to increase the quality and predictability of software development processes, both classical methodologies (CMMI) and agile (Scrum, Kanban). Also in how to get both (classical and agile) work together. I am interested in international projects and/or related to University research and technological innovation.

Education

| | | |
|-----------|---|----------------------------|
| 2012-2012 | Executive Program in Project Management Preparatory to obtain the PMP certification | EOI - Ministry of Industry |
